---

cite/cite command I have a problem with the apacitebib.bst. Using the cite/cite command inside of the `\begin{thebibliography} [...] \end{thebibliography}` does not work, the bibinfo in the bibliography does not get printed at all. I suppose this is because of an `\cite` that does not work. As I am not familiar with apacite, I tried to add a `\cite` command inside of the `\begin{thebibliography} [...] \end{thebibliography}` but the `\cite` was not even compiled, that is only a warning. Does someone have a clue for me, what I did wrong here? Here's a example of what I did `\documentclass{scrbook}`  
`\usepackage[citestyle=authoryear, backend=biber]{biblatex}` `\bibliography{sample}` `\usepackage{filecontents}`  
`\begin{filecontents}{sample.bib}` @misc{A01, author = {Author, A.}, year = {2001}, title = {Alpha} } `\end{filecontents}`  
`\begin{document}` 82157476af
